Skilled Pros

## Services

### Residential Grids

The quality of our life at home heavily relies on making sure that all of our home appliances and devices get a strong, proper power supply.

### Emergency Services

With our regular set of electrical maintenance, installation and repair services working 7 days a week, 24 hours a day, unfortunately some bad mishaps get out of our reach.

### Industrial Grids

As far as we're personally aware of the matter, every factory plant or a manufacturing site consumes a lot of electricity and power hence needs its electrical systems to be fully operational and watched after.

MORE SERVICES

Powered by **years of experience** and hundreds of satisfied customers, we work day and night to fix all your power supply problems!

## Edges We Have Over Competitors

### Range

The range of services that a company is able to offer is usually the most important edge over one's competition. We deal with everything from commercial and residential systems to industrial & solar!

### Team

Founded more than two decades ago and employing over two dozens of highly skilled and experienced electricians, our company trumps anyone else when it comes to hands-on, hard-earned prowess!

### Experience

Over the years of our work experience in the industry, we were able to accumulate a whole bunch of projects completed in a perfect fashion. All of our customers were so happy with the quality!

### Pricing

Unlike some of our direct competitors, we never make it unattainable for our customers. Our pricing policy has always been inclusive and affordable. Also, we have an extensive range of promo proposals!

## Customers Leave Positive Feedback

My whole house used to be powered by a very, and I mean a very old and an almost ancient grid. Eventually, as the time would have it, the grid failed to work. I've just had to ask a team of professional electricians for their help.

Harry Benson  
Client

Our whole commercial building, that houses approximately a dozen of offices of all kinds, relied on the power grid system that was not properly maintained. So it failed, of course. Luckily, we've hired these guys to fix it!

Gary Growles  
Client

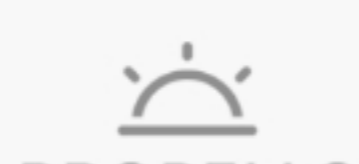

A few years ago we've set up our first solar panel system on top of the roof. Unfortunately, those technicians who were in charge of the job failed to do it properly, which ultimately resulted in a big power outage for us.

Daniela Robbery  
Client

## In Partnership With

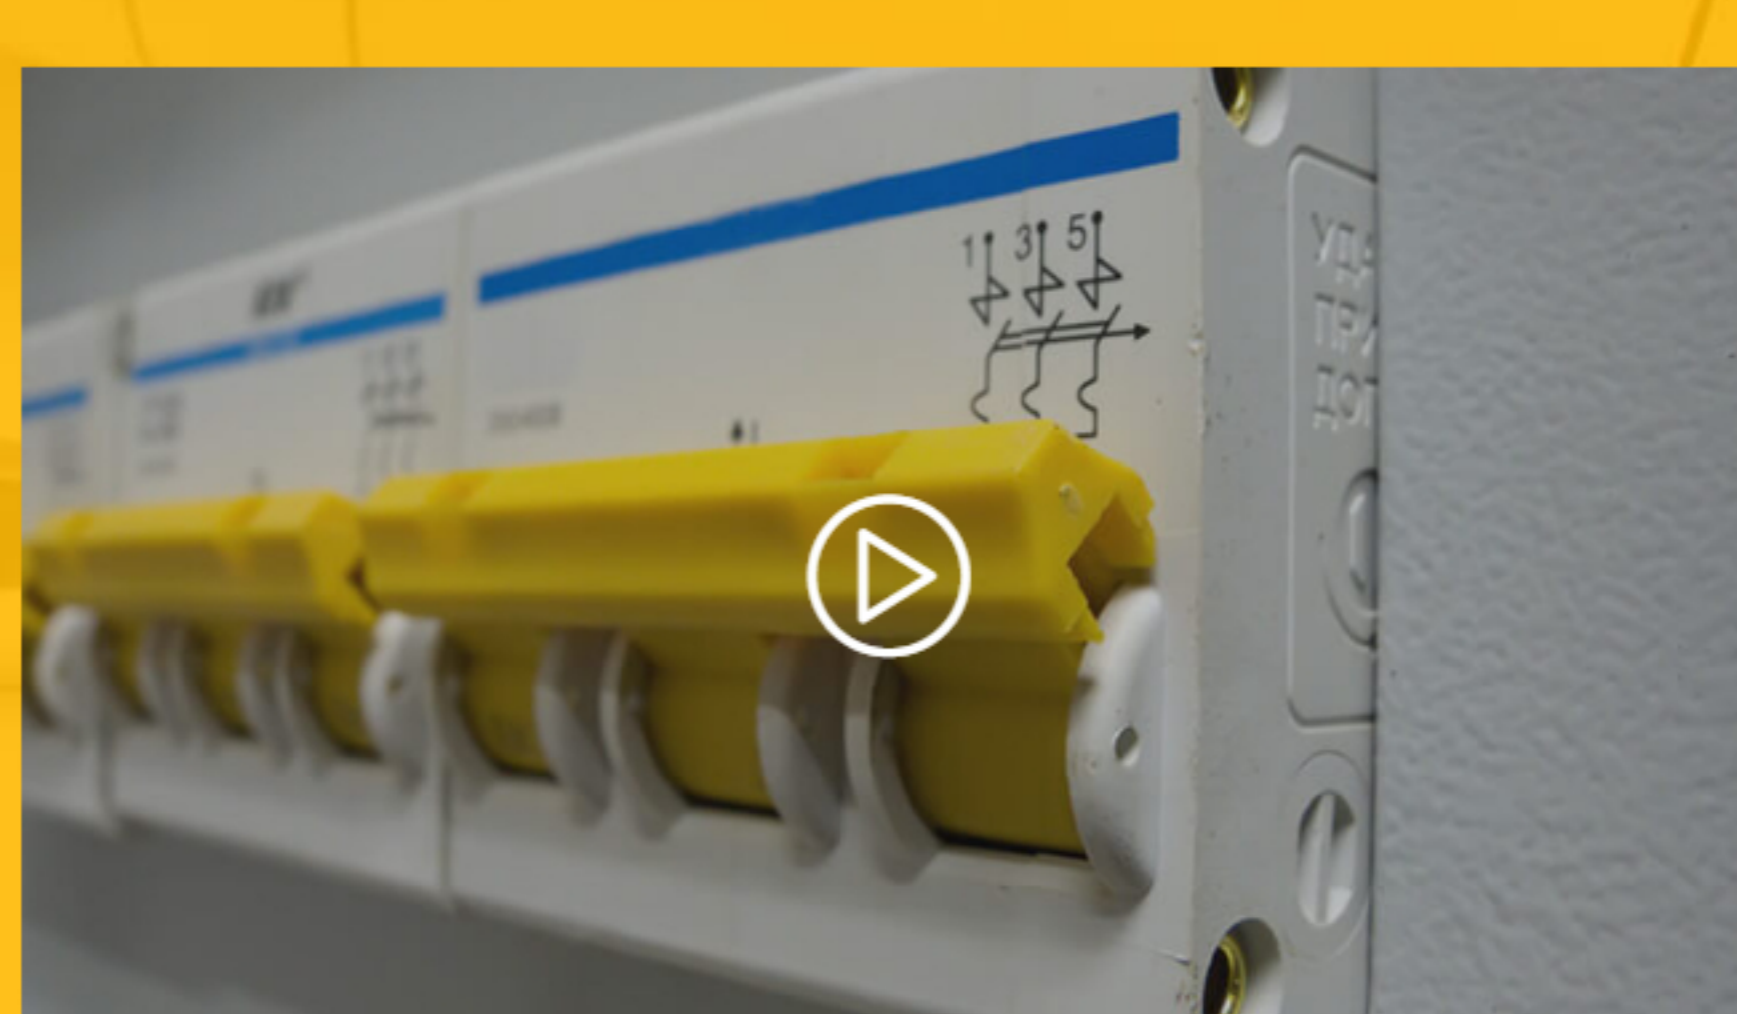

## Time-proven Quality!

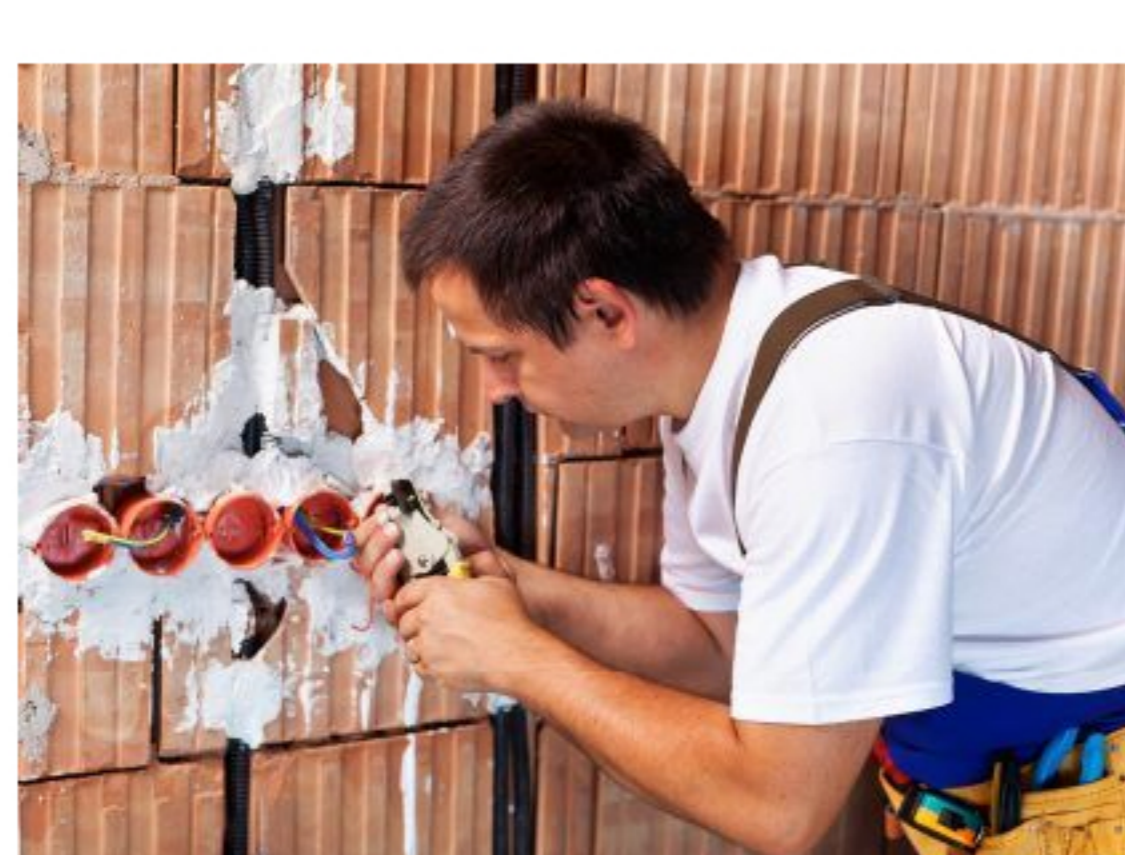

Staffed by former Navy mechanics and electricians, this company is built on a bedrock of success, strong work ethics, high quality and expedient processing.

Starting with commercial and residential power supply systems and all the way to industrial and solar, we're capable of fixing it all!

### Learning to Handle the Under/over Voltage Issue

Dec 3, 2016 by admin

There's a whole multitude of long-term system faults that can cause a problem as peculiar as the under voltage is. Basically being a mere case of undersupply of electricity to the grid, it's also oftentimes called "brownout".

### 7 Electrical Upgrades to Consider This Fall

Dec 3, 2016 by admin

Fall is the season to manage all the household updates, maintenance and such before the cold winter comes along and halts any indoors and outdoors large scale works. So if this September-November you're looking to eliminate electrical...

### 3 Signs It's Time to Replace a Light Switch

Dec 3, 2016 by admin

While not many people give that a thought, the light switches are basically our main tools for using the electricity, when we toggle them on and off, right? However, it's vital that you pay attention to whether your home's light switches across...

### About

Founded by a team of former USS Missouri (BB-63) electricians and mechanics who got their feet back on the dry ground when the ship was decommissioned in 1994, VoltaBolt makes case for one of the most rapidly growing and most efficient all-electrical companies in the local area.
